Outlook

GCash Parent Mynt IPO Price Swaps Valuation for Execution: React

Contributing Analysts Kirk Boodry (Telecom)

(Bloomberg Intelligence) -- RECENT EVENT REACTION: Mynt's pricing of its IPO at 6.6 pesos a share implies an equity value of about 442 billion pesos ($7 billion), below our $8-$11 billion range and 34% under the 10 peso offer ceiling. Strong institutional buyers' participation, taking up about 69% of the base offering, is likely to reduce execution and liquidity concerns, though the discount indicates investors are price sensitive amid weak fintech sentiment, despite GCash's robust profit growth. Globe's near-33% stake would be worth about $2.3 billion, though it isn't selling down its holding. The final offer price was announced on Oct. 1, with trading tentatively set for Oct. 20. (10/02/26)

Globe Telecom Profit to Edge Up, GCash IPO Nears: Equity Outlook

Contributing Analysts Kirk Boodry (Telecom)

THESIS: Globe Telecom's strengthening mobile, fiber and enterprise businesses could narrow its revenue gap with market leader PLDT and support a modest profit recovery this year, even as technology and regulation reshape Philippine telecom competition and inflation weighs on costs. Mynt, accounting for 28% of Globe's 1H pretax income, is set to list subsidiary GCash on Oct. 20 at 6.60 pesos a share, implying an equity value of about a $7 billion and roughly $2.3 billion for Globe's post-IPO stake, though the valuation reset and slower fintech earnings temper upside. Wholesale-network monetization and enterprise growth should become more important as lower entry barriers under the Open Access Network Act intensify retail competition. (10/08/26)

Key Topics Summary

GCash Value Unlocking: Globe's 33% stake in Mynt could become a clearer source of value after the operator of the popular GCash digital wallet completes its IPO. Mynt's valuation, reset to about $7 billion from earlier expectations of $8 billion - $11 billion, would make Globe's stake worth about $2.3 billion, equivalent to about 66% of its market value. Retaining the stake keeps the telco exposed to a faster-growing fintech asset as gains in its core connectivity business remains relatively modest. Mynt's profit contribution is also rising, accounting for 28% of Globe's 1H26 pretax income, up from 22% in 2025. New

Revenue Momentum to Build: Globe's 2026 service-revenue growth could reach the upper end of its low-to-mid-single-digit guidance after rising 6% in 1H, supported by mobile-data, fiber and enterprise demand despite cautious consumer spending. A commitment to rational pricing and a structural shift toward data-centric consumption provide a durable foundation for revenue growth. Yet monetization remains critical, as ARPU momentum stands in contrast to low-teens growth in mobile-data consumption. The rapid expansion of lower-priced prepaid fiber keeps fixed-broadband subscriber mix, ARPU and returns in focus amid stiff competition. New

Bloomberg Intelligence

Free Cash Flow Capped: Globe can sustain positive free cash flow, though growth is likely to moderate as reductions in capital investment level off. With capex set to remain at about 28% of revenue this year and guided at no less than $1 billion in 2027, inflationary pressure on network and operating costs is likely to temper 2H Ebitda growth and constrain cash generation. Dividend payouts are unlikely to exceed the midpoint of Globe's 60-90% payout range, effectively anchoring the quarterly dividend at the current 25 pesos a share. Deleveraging from its 4x net-debt-to-Ebitda ratio will take time, given Globe's decision not to sell its 33.8% stake in Mynt in the upcoming IPO.

Financial Review

Earnings

Globe to Show Margin Resilience as Costs Bite: Earnings Outlook

Contributing Analysts Kirk Boodry (Telecom)

Post-2Q Earnings: Globe's service Ebitda margin should hold above 52%, albeit still below 2025 levels, as rising costs are mostly offset by resilience across all segments, keeping full-year service-revenue on track for the upper end of guidance. Subscriber growth and retention are supporting mobile gains, but monetization has yet to boost ARPU enough to catch up with surging mobile data usage. Similarly, fiber expansion will grow the user base, but cheaper prepaid plans should keep fiber ARPU below 2025 levels. Long-term corporate contracts and expanding ICT capabilities, including data centers, provide strong tailwinds for corporate data revenue. Affiliate Mynt's GCash contributions, though about 10% lower in 2Q, should cushion lofty D&A and finance costs, which remain drags on net profit. (08/06/26)

Highlights From Recent Results:

- Service Revenue Extended Positive Momentum, Rising 7.6% in 2Q; Targets Low- to Mid-Single-Digit Full-Year Growth
- Mobile Service Revenue Increased 5.7% on Steady Subscriber Growth and Data Traffic, Though Prepaid ARPUs Point to a Lower Trend
- Ebitda Rose 6%, While Higher Costs Squeezed Margin 70 Bps to 52.5%
- Affiliate Mynt Accounted for 27% of Pretax Income vs. 29% in 1Q, on a Near 10% Lower Contribution From a Year Earlier

Fintech Push Stands Out

GCash Parent Mynt's Reset IPO Price to Test Path Beyond Payments

Contributing Analysts Kirk Boodry (Telecom)

A valuation cut to $7 billion for Mynt, parent of GCash, appears to reflect slower earnings, weak sentiment in the fintech space and a tougher Philippine equity-market backdrop, even though institutional demand supports execution. As the country's largest IPO since 2021, the planned Oct. 20 listing should benefit Globe Telecom, which owns about 34% of Mynt and is expected to retain roughly 33% post-event. GCash's dominance of mobile wallets keeps Globe ahead of PLDT in fintech, but future value creation will hinge on deeper monetization across financial services, particularly digital lending, and on containing rising credit risks. (10/07/26)

This report may not be modified or altered in any way. The BLOOMBERG PROFESSIONAL service and BLOOMBERG Data are owned and distributed locally by Bloomberg Finance LP ("BFLP") and its subsidiaries in all jurisdictions other than Argentina, Bermuda, China, India, Japan and Korea (the "BFLP Countries"). BFLP is a wholly-owned subsidiary of Bloomberg LP ("BLP"). BFLP, BLP and their affiliates do not provide investment advice, and nothing herein shall constitute an offer of financial instruments by BFLP, BLP or their affiliates.

This document is being provided for the exclusive use of YUBO SUI at THE CHINESE UNIVERSITY OF HONG KONG. Not for redistribution.

Mynt's IPO Pricing Change Reflects Caution

Mynt's 6.60-peso IPO offer price implies an equity value of about 442 billion pesos or $7 billion, below the prior $8-$11 billion targeted range. The deal is attracting institutional buyers, who form about 69% of the 53 billion-peso base offer, but the reset at roughly one-third below ceiling price underscores weak global fintech sentiment and the Philippines' challenged equity-market performance.

A $7 billion valuation implies a forward price-earnings ratio of about 23-24x, based on our 2026 net-profit estimate of a 10% rise to 19 billion pesos ($303 million). That marks a sharp slowdown from roughly 64% compound annual earnings growth in 2023-25, reflecting regulatory-led curbs on gaming-linked payment revenue, rising operating costs and higher financing costs. The slowdown raises the importance of Mynt broadening monetization beyond payments as growth normalizes.

GCash's 89% share of the Philippine mobile-wallet market and more than 90 million registered users remain key to support its valuation, but slowing earnings growth increases the importance of extracting more value from its existing ecosystem.

The offer could raise about 60.9 billion pesos ($973 million), implying a 13.8% public float if the overallotment option is fully exercised. That would make Mynt the Philippines' largest IPO on record, surpassing Monde Nissin's roughly 55.9 billion-peso 2021 offer. (10/07/26)

Enterprise Value Based on P/E Ratio, Net Profit

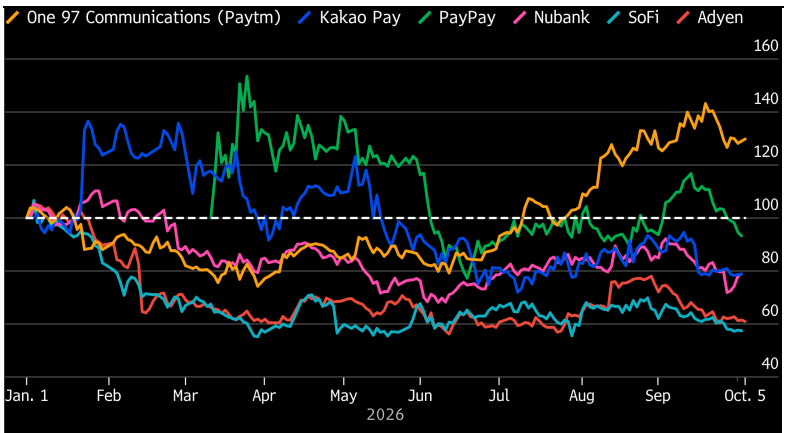

Philippine Peso	FY26 Net Profit	18x	20x	22x	23x	24x	25x
Lower-End Scenario (-20%)	15B	272B	303B	333B	348B	363B	378B
Low-End Scenario (-10%)	17B	307B	341B	375B	392B	409B	426B
Base Case	19B	341B	378B	416B	435B	454B	473B
High-End Scenario (10%)	21B	375B	416B	458B	479B	499B	520B
Higher-End Scenario (20%)	23B	409B	454B	499B	522B	545B	568B

Note: Calculations are based on Bloomberg Intelligence's expectations for Mynt's net profit growth to slow to 10% in 2026, pointing to about 19 billion pesos. FX rate as of Oct. 5, 2026, at 62.5 pesos per USD.

Globe Holds GCash Stake as IPO Crystallizes Value

Globe's apparent decision not to sell down its 33.8% stake in Mynt means the IPO shouldn't be viewed as a cash-monetization event, despite the telco's relatively high leverage and at least $1 billion capex target in 2027. Globe's stake will fall modestly to about 33% post-IPO based on dilution from the proposed sale of 1.6 billion primary shares, in addition to 7.6 billion secondary shares including the over-allotment option. At Mynt's $7 billion valuation, Globe's retained stake will be valued at roughly $2.3 billion, equivalent to about two-thirds of its market capitalization. Retaining a 33% stake preserves Globe's exposure to a higher-growth fintech asset that has helped offset more modest growth in its core-connectivity business.

Mynt accounted for 28% of Globe's 1H26 pretax income, up from 22% in 2025. (10/07/26)

Bloomberg Intelligence

Globe's Fintech Edge to Broaden Beyond GCash's e-Wallet

Globe Telecom stands out in the fintech landscape through digital platform GCash, whose 89% share of the Philippine mobile-wallet market and strong first-mover advantage give the telco a differentiated position vs. PLDT's digital bank, Maya Bank. GCash could potentially sustain wider margins than Maya, whose digital-banking model carries greater regulatory and balance-sheet requirements.

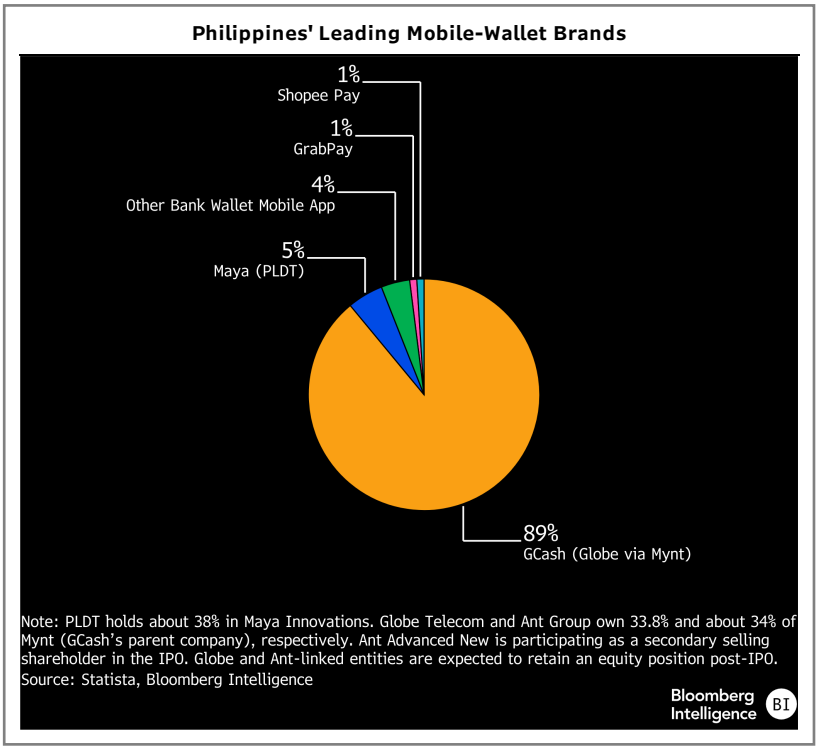

Yet with its wallet share already dominant, GCash's next phase of growth will rely less on further market-share gains and more on monetizing its broader ecosystem. Its 41.5 million monthly active users at the end of June, equivalent to nearly 56% of Philippine adults, give it substantially more consumer reach than Maya and a large distribution base for higher-value financial services. Deeper engagement across credit, where GCash has 7.5 million active borrowers, as well as wealth and insurance, should become increasingly important as core payments mature.

Backed by Ant Group, GCash's integration with Alipay's global network provides an additional avenue for overseas expansion and customer acquisition.

Telcos are capitalizing on the Philippines' digital push with the central bank aiming to digitize 60-70% of monthly retail transactions by 2028, up from 57.4% in 2024. (10/07/26)

Payments Maturity Shifts Focus to Financial Services

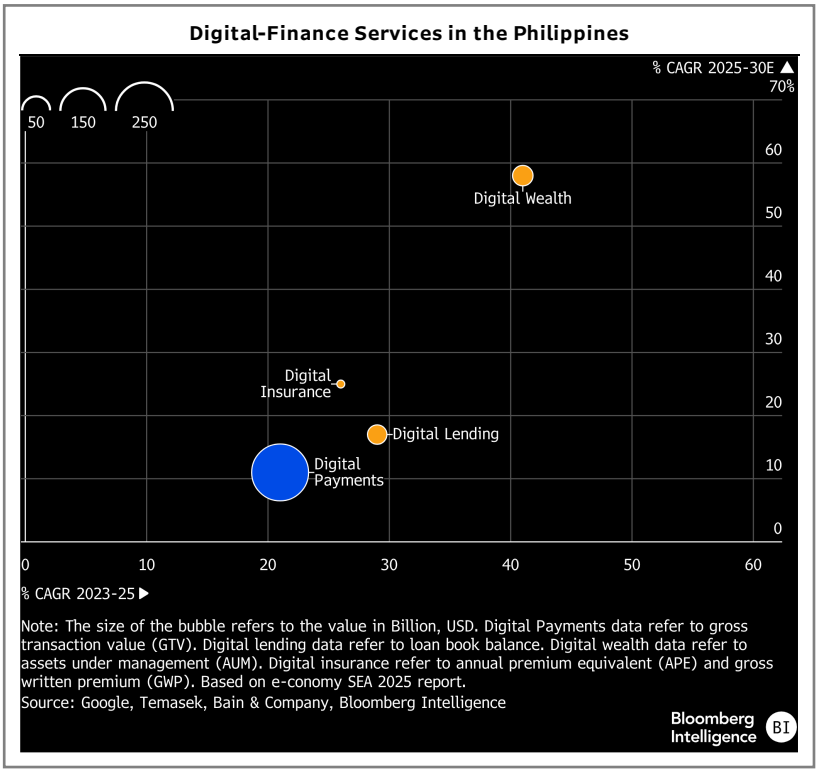

Digital payments remain the anchor of the Philippines' fintech ecosystem but future growth will increasingly come from embedding lending, wealth and insurance into established digital platforms. Super-apps such as GCash are positioned to monetize their large user bases as financial products shift toward app-based distribution, supported by the country's favorable policies and 84% internet penetration. As QR payments and e-wallets mature, additional growth will increasingly come from deeper financial-services penetration.

Digital lending could be particularly important for Mynt, which can leverage transaction data and its distribution reach to expand credit. IPO proceeds earmarked for CreditTech, platform and AI investment could deepen monetization per user, though faster lending growth also raises credit and underwriting risk.

About half of Filipino adults owned a formal financial account in 2025, while just 23% had a bank account, leaving ample scope for mobile wallets, digital banks and fintech-credit providers to deepen inclusion. (10/07/26)

Telcos' Dividend Playbook

SE Asian Telcos' Dividends Anchor Appeal Amid Macro Headwinds

Contributing Analysts Kirk Boodry (Telecom)

Telkom Indonesia, Singtel and Telekom Malaysia's 2H26 dividend payout capacity sets the tone for peers PLDT and Globe, where competing cash demands keep expectations in check. Southeast Asian telcos' defensive appeal remains intact, with dividends continuing to stand out despite narrower yield spreads over government bonds. Telkom Indonesia's expected cash inflows add support to its payout potential. (06/23/26)

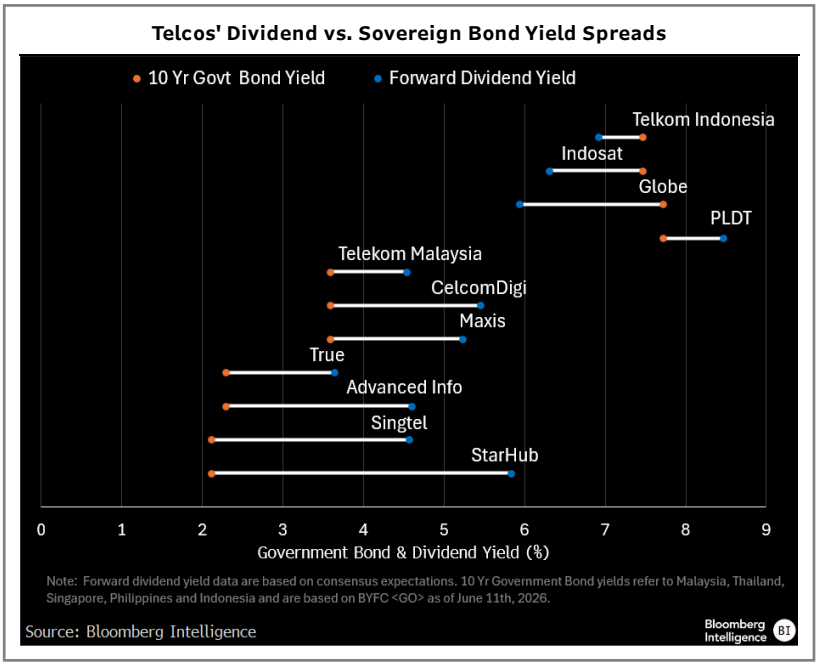

Defensiveness Intact Even as Yield Spreads Narrow

Southeast Asian telcos' defensive characteristics remain broadly intact, even as central banks tilt back toward tightening to curb inflation spurred by the Iran war. StarHub, Singtel and AIS offer the group's widest spreads, while Malaysian peers continue to post healthy positive yield spreads over local government bonds. Indonesian and Philippine telcos warrant more caution given both markets' greater exposure to geopolitical tensions and policy uncertainty. Telkom Indonesia stands out if market risks ease, supported by its high free-cash-flow yield and improving payout prospects.

Higher benchmark rates will weigh on debt-servicing costs for leveraged Philippine telcos, especially Globe Telecom despite its premium valuation, while cheaper-valued PLDT would use cash from a potential REIT listing to pare debt. (06/23/26)

Some Telcos Hold More Payout Firepower

Telkom Indonesia, Singtel and Telekom Malaysia's stronger payout capacity should distinguish them from peers in 2H26. Telkom Indonesia stands out for data-center and non-core asset monetization, alongside efforts to unlock value from fiber assets, adding to cash reserves and payout capacity while funding a renewed 4 trillion rupiah buyback. Singtel's S$2 billion buyback can lift returns, while partner-funded digital-infrastructure plans and a S$9 billion asset-recycling plan support higher payout commitments despite Optus outage penalties and a larger STT Global Data Center stake. Any Optus stake sale would add to its special-dividend capacity. Telekom Malaysia's low debt, steady cash flow from its U Mobile deal and expected digital-infrastructure inflows support higher payout capacity after its policy increase to 75%. (06/23/26)

Bloomberg Intelligence

Internal Cash Calls Restrain Peer Payouts

Dividend growth looks stretched for some telcos as deleveraging, capex and M&A vie for cash. For PLDT and Globe, debt reduction is a priority, while minority stakes mean fintech IPOs would contribute only limited proceeds. Cash from PLDT's 4Q26 data-center IPO is earmarked for debt reduction, not payouts. Indosat's dividend capacity hinges on a fiber-asset sale to avoid a free-cash-flow crunch from higher investment and spectrum costs. True's move to more frequent dividends is encouraging but post-merger deleveraging is in focus, while AIS's strong balance sheet should keep payouts above its 70% policy despite heavier capex.

Maxis and CelcomDigi can hold dividends steady, but larger stakes in unprofitable 5G-access provider DNB keep cash needs in focus. Starhub's transition year and M&A interest point to a stable payout.
(06/23/26)

Key Topics

GCash Value Unlocking

Globe's 33% Mynt Stake Set to Crystallize Value via GCash IPO

Globe's 33% stake in Mynt could become a clearer source of value after the operator of the popular GCash digital wallet completes its IPO. Mynt's valuation, reset to about $7 billion from earlier expectations of $8 billion - $11 billion, would make Globe's stake worth about $2.3 billion, equivalent to about 66% of its market value. Retaining the stake keeps the telco exposed to a faster-growing fintech asset as gains in its core connectivity business remains relatively modest. Mynt's profit contribution is also rising, accounting for 28% of Globe's 1H26 pretax income, up from 22% in 2025.

Revenue Momentum to Build

Globe Revenue Outlook Brightens But Monetization Yet to Improve

Globe's 2026 service-revenue growth could reach the upper end of its low-to-mid-single-digit guidance after rising 6% in 1H, supported by mobile-data, fiber and enterprise demand despite cautious consumer spending. A commitment to rational pricing and a structural shift toward data-centric consumption provide a durable foundation for revenue growth. Yet monetization remains critical, as ARPU momentum stands in contrast to low-teens growth in mobile-data consumption. The rapid expansion of lower-priced prepaid fiber keeps fixed-broadband subscriber mix, ARPU and returns in focus amid stiff competition. (10/08/26)

Free Cash Flow Capped

Globe Cash Flow, Dividend Face Test Amid Slower Ebitda Gains

Globe can sustain positive free cash flow, though growth is likely to moderate as reductions in capital investment level off. With capex set to remain at about 28% of revenue this year and guided at no less than $1 billion in 2027, inflationary pressure on network and operating costs is likely to temper 2H Ebitda growth and constrain cash generation. Dividend payouts are unlikely to exceed the midpoint of Globe's 60-90% payout range, effectively anchoring the quarterly dividend at the current 25 pesos a share. Deleveraging from its 4x net-debt-to-Ebitda ratio will take time, given Globe's decision not to sell its 33.8% stake in Mynt in the upcoming IPO. (10/08/26)

Chart Book

Company

Globe Telecom Defends Mobile Lead, Eyes AI and Enterprise Growth

Globe Telecom's strategic outlook rests on scaling up its network, expanding the GCash ecosystem and building an emerging AI-driven data-center business. To defend mobile leadership, the operator is relying on AI hyper-personalization to drive lower-tier average revenue per user while leveraging Mynt's GCash, the dominant Philippine e-wallet, for retention. In wireline, Globe targets structural growth given the country's low 32% fixed-broadband penetration. Although disciplined spending supports free cash flow for now, an aggressive push in enterprise information and communications technology will contribute to at least $1 billion in 2027 capex. This outlay will keep capital intensity above the sub-20% regional peer average, even as management unlocks value through Mynt's upcoming IPO. (10/09/26)

Globe Credit Outlook

Globe Bonds' Technicals Outweigh 4x Leverage: Credit Outlook

Contributing Analysts Sharon Chen (BI) (Credit) & Lisa Zhou (Credit)

THESIS: Globe Telecom's net leverage could remain near 4x, with no proceeds from GCash's upcoming IPO, stable capex guidance and inflation weighing on Ebitda growth. Its dollar bonds trade at tight spreads relative to its weaker credit profile, which maps to a Ba1 rating under Moody's methodology, most likely due to strong technical support and its stable outlook. (09/10/26)
