Outlook

SpaceX Low-Band Deal Advances Starlink Mobile Ambitions: React

Contributing Analysts Matt Coyne (Telecom)

(Bloomberg Intelligence) -- RECENT EVENT REACTION: SpaceX's planned acquisition of roughly 14 megahertz of nationwide 800 MHz spectrum from Grain Management should strengthen Starlink Mobile's long-range and in-building coverage, advancing its push to become a stand-alone wireless carrier while raising the competitive risk to Verizon, AT&T and T-Mobile. The low-band licenses complement the 65 MHz of midband spectrum SpaceX is acquiring from EchoStar, which offers greater capacity but more limited propagation. Satellite use of the 800 MHz block would still require additional FCC authorization, though the band could also support the terrestrial small-cell layer SpaceX has discussed. Together, the holdings give SpaceX a more balanced spectrum portfolio and reduce its dependence on carrier partners. (10/09/26)

T-Mobile Revenue Gains Slow on Rising Headwinds: Equity Outlook

THESIS: T-Mobile faces slowing revenue and account growth due to market maturity and rising competition from Verizon. In response, it's tapping a deep spectrum portfolio to extend its 5G lead while using M&A to expand in fiber. It's also leveraging AI efficiencies to drive core adjusted Ebitda and free-cash-flow growth as top-line gains slow. T-Mobile covers more than 300 million people with its ultra-capacity 5G network, though market maturity will make user growth increasingly difficult, prompting it to raise rates to counter the pressure. Network-capacity additions are enabling newer services such as fixed wireless access, which should also help buoy revenue. (07/24/26)

Key Topics Summary

T-Mobile Disrupting at Scale: T-Mobile's scale, spectrum depth and Un-carrier brand strategy can help sustain above-industry growth in coming years despite mature US market conditions. The Sprint and UScellular deals expanded its scale and reach in smaller and rural markets, where further penetration presents a growth opportunity. Its 5G lead and broadband expansion are driving account, ARPA and margin gains, while fiber, enterprise, satellite and other adjacencies offer additional revenue upside.

T-Mobile Leans Into Broadband: T-Mobile's broadband expansion remains a key top-line growth driver, with service revenue expected to rise 7.9% this year, based on consensus, as it continues to lead peers in fixed-wireless access. Broadband growth is helping to offset moderating mobile trends. The company has partnered with alternative asset managers to gain a foothold in fiber, providing it with broader access to the $123 billion US broadband market.

This report may not be modified or altered in any way. Bloomberg Intelligence

Telecoms Steady on Broadband: The BI North America telecom-carrier peer group is up 2.67% year to date through June 16, including dividends, 760 bps shy of the S&P 500's 10.27% gain as concern over rising rates dragged on performance. Broadband expansion and a greater focus on selling bundled services are providing a lift that's helping offset pressure from market saturation and cable competition. Fiber and fixed-wireless access broadband will remain growth drivers in 2H.

Financial Review

Earnings

T-Mobile Growth Story Fades as Headwinds Mount: Earnings Outlook

Post-2Q Earnings Outlook: T-Mobile's mixed results and cautious tone reflect a saturated market where subscriber gains alone can no longer sustain robust revenue growth. The inorganic lift from the UScellular acquisition will fade after Aug. 1, prompting T-Mobile to implement select 3Q rate increases to sustain top-line growth. It expects postpaid account net additions of about 250,000 vs. consensus' 302,500 as churn temporarily rises, though this metric remained low in 2Q at 0.99%.

Satellite broadband was a big theme on the earnings call. T-Mobile said its urban focus in fixed-wireless access should limit any pressure from Starlink because its current fleet can't support high connection densities, making the service more complementary than competitive. Still, we see next-generation satellites raising the threat level. (07/23/26)

Highlights From Recent Results:

- 2Q Revenue Rose 7.9% to $22.8 Billion, With Postpaid Service Revenue Up 12.6% to $15.9 Billion; Total Revenue Missed Consensus by 0.6%
- Postpaid Account Net Additions of 277,000 Topped the 264,300 Estimate; Average Revenue Per Account Rose 2% to $152.91 vs. $152.94 Estimate 0.99% Churn
- Adjusted Core Ebitda Margin Was 50.2%, Up 120 Bps Year Over Year, Ahead of 49.5% Estimate
- Adjusted Diluted EPS of $2.99 Topped Consensus' $2.59; Adjusted Free Cash Flow of $4.8 Billion vs. $4.6 Billion Estimate, Up 4.4% YoY

Long-Term Drivers

T-Mobile 5G Lead Helps to Buoy Growth as Wireless Market Matures

Contributing Analysts Matt Coyne (Telecom)

T-Mobile's sales are poised to rise 6.9% this year, per consensus, vs. 8.5% in 2025, while service-revenue growth is seen flat at 7.7% vs. 7.8%. Its 5G lead is helping to sustain growth by driving share gains on improved network quality. Postpaid accounts and average revenue per account remain key revenue drivers, with guidance for 950,000-1.05 million net account additions this year on 2.5-3% growth in average revenue per account. Share gains in broadband, enterprise and rural markets are helping offset a wireless-market slowdown as the inorganic lift from UScellular fades.

The 2026 guidance midpoint reflects 10% growth in core adjusted Ebitda, fueled by a services mix shift, UScellular synergies, and digital and AI efficiencies. The company expects free cash flow to expand 3.3% this year by keeping capital spending roughly flat at $10 billion. (08/15/26)

Key Topics

T-Mobile Disrupting at Scale

T-Mobile's 5G Lead Translates to Ongoing Revenue, Margin Gains

T-Mobile's scale, spectrum depth and Un-carrier brand strategy can help sustain above-industry growth in coming years despite mature US market conditions. The Sprint and UScellular deals expanded its scale and reach in smaller and rural markets, where further penetration presents a growth opportunity. Its 5G lead and broadband expansion are driving account, ARPA and margin gains, while fiber, enterprise, satellite and other adjacencies offer additional revenue upside. (07/06/26)

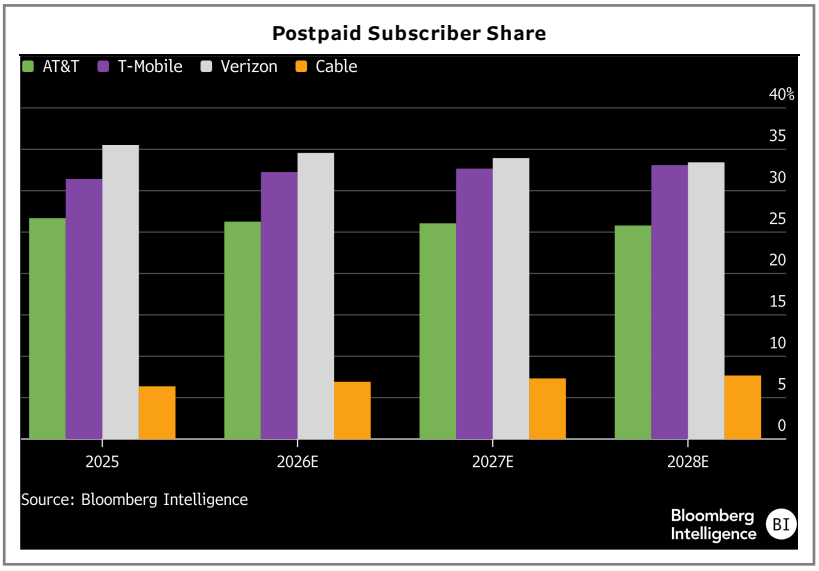

Greater Scale Boosts Competitive Clout

T-Mobile's larger scale following its 2020 Sprint acquisition supports ongoing share gains by providing the ability to build an industry-leading 5G network, with greater efficiencies in marketing, distribution, customer care and network investments. That merger, plus the recent UScellular acquisition, expanded T-Mobile's reach in smaller markets, setting the stage for sustained revenue, Ebitda and free-cash-flow growth. T-Mobile ended 2025 with 116.4 million postpaid customers after adding 15.4 million postpaid phone subscribers in 2020-25, while its 5G fixed-wireless-access broadband base, including postpaid and prepaid, reached 8.5 million users at year-end 2025. The company is also deepening relationships with subscribers by broadening its digital channels.

Small and rural markets remain a big growth opportunity, with T-Mobile's share rising to 24% at the end of 2025 from 13% in 2020, with room for further gains. Scale benefits are reflected in 2026 guidance, which calls for a 23% gain in core adjusted Ebitda and 2.3% free-cash-flow growth at the $18.4 billion guidance midpoint. (07/06/26)

This report may not be modified or altered in any way. This document is being provided for the exclusive use of YUBO SUI at THE CHINESE UNIVERSITY OF HONG KONG. Not for redistribution.

5G Edge Stems From Spectrum Depth

T-Mobile's network lead is rooted in its spectrum depth that has helped it build a 5G network with broader coverage and capacity than rivals in many markets. It controls roughly 394 MHz of low- and mid-band spectrum nationwide, including 41 MHz of 600 MHz low-band and 184 MHz of 2.5 GHz mid-band. The long-range propagation and in-building reach of 600-MHz helped T-Mobile expand in rural and indoor markets, while Sprint's 2.5-GHz holdings provide the bandwidth needed for its high-speed 5G Ultra Capacity network and fixed wireless access.

Opensignal's January 2026 US Mobile Network Experience report showed T-Mobile leading in 5G Coverage Experience, with a score of 8.3 out of 10, and Download Speed Experience at 184.7 Mbps vs. AT&T's 74.9 Mbps and Verizon's 73.8 Mbps. This spectrum and performance gap should help T-Mobile sustain traction in enterprise accounts, broadband and smaller and rural markets. (07/06/26)

Spectrum Holdings (MHz)

Band	SpaceX	EchoStar	AT&T	Verizon	T-Mobile
600 MHz	—	—	22.6	—	41.0
700 MHz	—	4.6	47.8	21.7	10.0

'Un-carrier' Brand Strategy Still Resonates

T-Mobile's network quality and value-oriented Un-carrier brand strategy has fueled consistent, industry-leading subscriber gains. Its Un-carrier campaign fosters a hip, counterculture image that has helped it take a leading share of postpaid net additions in most quarters, including 37.5% of industry postpaid phone net adds in 2025 vs. AT&T's 17.7%, Verizon's 4.1% and cable's 40.1%, though cable's reported figures includes some connected devices.

T-Mobile’s value strategy has historically pressured margins, but lower pricing was needed to attract users when the company was subscale. With coverage now on par with rivals, it has reduced heavy promotions and raised rates on select legacy plans to support revenue and profitability. Looking ahead, we expect it to tread cautiously on pricing to protect its consumer-friendly image. (07/06/26)

Growth Strategy Includes Small-Market Expansion

T-Mobile's $4.4 billion acquisition of UScellular's wireless operations added more than 4 million subscribers and expanded its presence in smaller markets, where penetration remains low at just over 24% of households. The deal can help the company sustain user growth above the industry average, with 40% of the US population living outside the top 100 cities. T-Mobile sees an opportunity to reach 33% penetration in these areas in coming years as it expands its network coverage, retail presence and brand awareness. In addition to acquiring UScellular's store base, T-Mobile bought 30% of its spectrum holdings.

Though relatively small for T-Mobile, we believe the deal may have prevented rivals, including cable operators, from gaining access to UScellular’s valuable spectrum and subscribers. (07/06/26)

T-Mobile/US Cellular Transaction Overview

Wireless Operations	• Sale of wireless operations and select spectrum assets to T-Mobile for $4.4 billion purchase price -Payable in a combination of cash and up to $2 billion in assumed debt • Wireless operations include: subscribers, network assets and operations (excluding owned towers), sales and distribution, and customer care • Up to $100 million of the purchase price is contingent on certain financial and operational metrics between signing and closing and is subject to other adjustments as specified in the purchase agreement • Transaction expected to close in mid-2025, subject to regulatory approval and satisfaction of customary closing conditions
Tower MLA	• T-Mobile to enter into a new, 15-year Master License Agreement (MLA) with US cellular on a minimum of 2,015 incremental US cellular towers following the transaction • T-Mobile to extend the term of its tenancy on the ~600 sites where T-Mobile is already a tenant for 15 years post-transaction
Spectrum	• T-Mobile will acquire approximately 30% of US cellular's spectrum portfolio, including all of the company's 600 MHz, 2.5 GHz and 24 GHz, as well as the majority of its 700 MHz A Block, AWS and PCS holdings

Note: ~39% of the 600 MHz subject to a put/call agreement. To the extent the put/call is exercised, an incremental $106 million of purchase price will be due.

Bloomberg Intelligence BI

Investing in Adjacencies as Wireless Growth Slows

T-Mobile is investing in adjacencies to sustain service-revenue growth as the US wireless market slows. Broadband remains the biggest near-term driver, with management targeting 15 million fixed-wireless-access customers by 2030. Fiber joint ventures such as Lumos and Metronet support a goal of reaching 12-15 million homes passed and 3-4 million fiber customers by the end of the decade. Enterprise mobility is another growth segment that lies outside of consumer wireless through T-Mobile for Business.

Longer-term, its T-Satellite service can help secure premium-plan relationships by offering coverage beyond T-Mobile's terrestrial network, while T-Ads, financial services and AI/6G initiatives offer emerging revenue opportunities. Broadband and enterprise appear to be the most meaningful near-term contributors, while the other segments offer longer-term upside. (07/06/26)

This report may not be modified or altered in any way. The BLOOMBERG PROFESSIONAL service and BLOOMBERG Data are owned and distributed locally by Bloomberg Finance LP ("BFLP") and its subsidiaries in all jurisdictions other than Argentina, Bermuda, China, India, Japan and Korea (the "BFLP Countries"). T-Mobile Leans Into Broadband

T-Mobile Scales Up in Broadband After Adding Fiber to the Mix

T-Mobile's broadband expansion remains a key top-line growth driver, with service revenue expected to rise 7.9% this year, based on consensus, as it continues to lead peers in fixed-wireless access. Broadband growth is helping to offset moderating mobile trends. The company has partnered with alternative asset managers to gain a foothold in fiber, providing it with broader access to the $123 billion US broadband market. (06/05/26)

Broadband Takes On Larger Role in Growth as Wireless Slows

T-Mobile led rivals in FWA users last year, with growth in the unit likely to outpace wireless, though its decision to stop reporting broadband metrics makes progress hard to track. We calculate broadband sales reached $4.8 billion in 2025, up over 42% vs. 2024. This momentum may carry over into 2026 and 2027, when service revenue is seen rising 7.9% and 5.2%. Though FWA user gains are slowing, T-Mobile's fiber expansion should help sustain growth. It's established several joint ventures with alternative asset managers to acquire fiber providers to boost subscribers and homes passed. In these partnerships, T-Mobile owns the customer relationship, while the JVs manage network operations.

T-Mobile had 997,000 fiber users at year-end 2025 and is on pace to reach a 3-4 million goal by 2030, including 12-15 million homes passed. (06/05/26)

Source: Bloomberg Intelligence

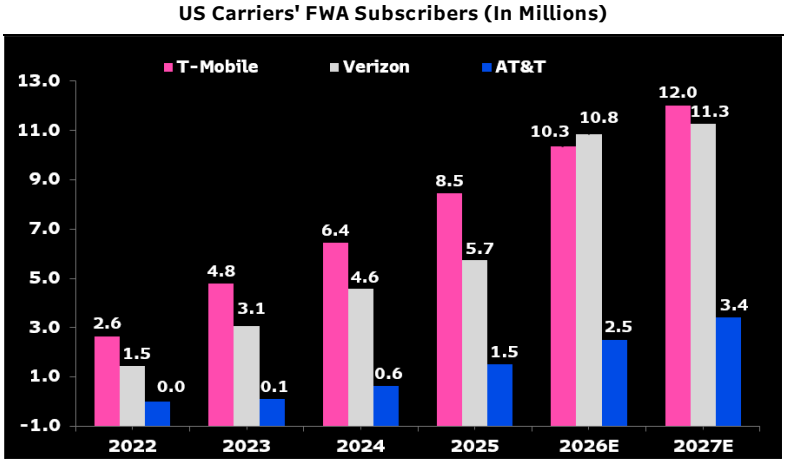

Leader in Fixed-Wireless Access

The big three US carriers all offer FWA, with T-Mobile leading in 2025 thanks to its superior spectrum holdings, serving 8.5 million subscribers vs. Verizon's 5.7 million and AT&T's 1.5 million. AT&T is deploying FWA more broadly as the technology offers a good alternative where it lacks fiber. Easy installation and wireless delivery have made FWA popular with consumers, yet capacity constraints limit how widely carriers can deploy it. T-Mobile may continue to take share from cable with FWA, though Starlink's emergence as a large rival could create a new source of pressure on FWA net additions.

Still, FWA's growth is expected to outpace most alternatives, with its installed share projected to reach 17% in 2030, up from 14.4% in 2026, according to Omdia. Cable's share is expected to decline to 42.3% from 50.4%. (06/05/26)

This report may not be modified or altered in any way. The BLOOMBERG PROFESSIONAL service and BLOOMBERG Data are owned and distributed locally by Bloomberg Finance LP ("BFLP") and its subsidiaries in all jurisdictions other than Argentina, Bermuda, China, India, Japan and Korea (the ("BFLP Countries"). Source: Bloomberg Intelligence

T-Mobile Deepens Commitment to Fiber

T-Mobile is expanding in fiber broadband to advance its convergence strategy and reduce reliance on fixed-wireless access for growth. It's entered into 50/50 joint ventures with KKR, EQT, Wren House Infrastructure and Oak Hill Capital to acquire fiber providers such as Lumos, Metronet and others, with the aim of expanding their networks. T-Mobile owns the customer relationships, while the JVs operate the networks and sell wholesale capacity back to T-Mobile. These deals mark the company's deeper commitment to fiber as the next phase of its broadband strategy, given the technology's high capacity, symmetrical speeds and durability.

T-Mobile's larger footprint offers greater exposure to the $37.6 billion US fiber-broadband market, positioning it in a subsegment expected to grow at an 11.1% annual rate in 2025-30. (06/05/26)

Telecoms Steady on Broadband

Broadband Growth, Iran War Resolution Lift Telecom Shares

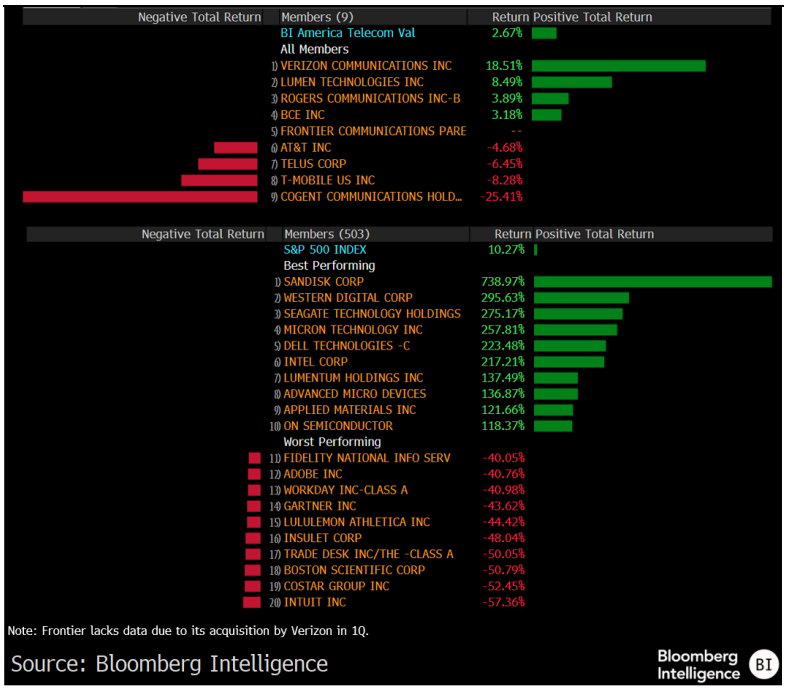

The BI North America telecom-carrier peer group is up 2.67% year to date through June 16, including dividends, 760 bps shy of the S&P 500's 10.27% gain as concern over rising rates dragged on performance. Broadband expansion and a greater focus on selling bundled services are providing a lift that's helping offset pressure from market saturation and cable competition. Fiber and fixed-wireless access broadband will remain growth drivers in 2H. (06/18/26)

Broadband Gains Aid Performance

The US telecom-carrier group is trailing the S&P 500's performance year to date by 760 bps through June 16, with a total return of 2.67% vs. the index's 10.27%. Though wireless-market saturation and heavy competition are headwinds, efforts to reduce churn through bundling and price-lock guarantees have alleviated some of the pressure. Strong demand for fiber and fixed-wireless access broadband have also helped mute these headwinds.

The carriers continue to capture broadband share from cable, while their domestic business models have shielded them somewhat from fallout due to the war in Iran and tariffs. Inflation fears from rising oil prices weighed on telecom stocks, which are highly sensitive to rate fluctuations. Lumen, which is heavily levered, has also contributed to volatility in the peer group. (06/18/26)

Telco Returns, Including Dividends (Year to Date)

Fiber, FWA to Buoy Telecom Outlook in 2026

The BI North America telecom-carrier peer group's valuation rebounded from lows in early April tied to rising inflation concern from a spike in oil prices. The group is trading above year-end 2025 levels. The relative underperformance year to date is due partly to T-Mobile's multiple compression, likely tied to a decision to significantly reduce disclosure of key metrics, along with its vulnerability to slowing subscriber growth amid Verizon's shift to a volume-based strategy. The group traded at 6.6x

This report may not be modified or altered in any way. The BLOOMBERG PROFESSIONAL service and BLOOMBERG Data are owned and distributed locally by Bloomberg Finance LP ("BFLP") and its subsidiaries in all jurisdictions other than Argentina, Bermuda, China, India, Japan and Korea (the ("BFLP Countries"). Bloomberg Intelligence

EV/forward 12-month Ebitda on June 30, 2025, vs. 6.8x at year-end 2024. Constructive factors like improving service-mix quality, rising free cash flow and cost cuts likely helped buoy valuation.

In 2H, key growth drivers include fiber and fixed-wireless access expansion and increased bundled services sales, which lowers churn. (06/18/26)

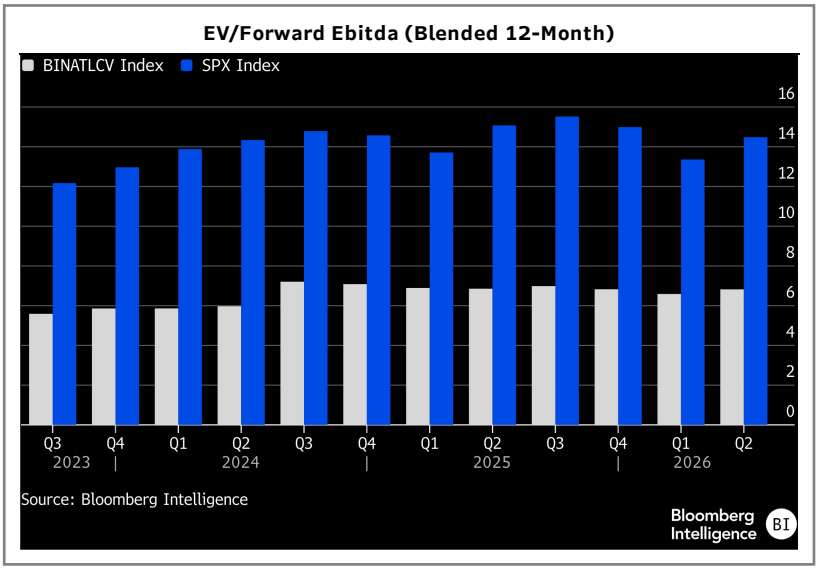

Chart Book

Company

T-Mobile Leads in 5G as It Focuses on Broadband Expansion

Contributing Analysts Hunter Sacco

T-Mobile, the second-largest US wireless carrier, has outpaced peers in postpaid net additions since 2014 by leveraging its consumer-friendly brand, aggressive marketing and ample mid-band spectrum to fuel growth. Its expansive 5G network has allowed it to lead rivals in availability and download speeds, according to Opensignal's June 2025 Global Mobile Network Experience Awards, with the company now extending these capabilities into smaller markets. In broadband, T-Mobile has grown steadily in fixed-wireless access and sidestepped a lack of wireline infrastructure to enter the fiber market through several partnerships. It plans to leverage FWA in the near term and fiber longer term to stay competitive with rivals in the broadband market.

Peers

T-Mobile Aims to Sustain Lead in 5G, Fixed Wireless Access

Contributing Analysts Hunter Sacco

T-Mobile, the second-largest US wireless carrier, is leveraging its consumer-friendly brand and industry-leading 5G coverage to outpace Verizon and AT&T in postpaid net adds. It also leads peers in fixed wireless access, where it aims to reach 12 million users by 2028, above Verizon's 8-9 million goal. Its consumer fiber footprint -- at 4 million homes passed -- is modest compared with AT&T's 25.1 million and Verizon's 18 million, though it plans to reach 12-15 million by 2030. By expanding its network in smaller markets and filling out metro coverage, it's poised to outpace rivals' revenue

Sturdy Debt Profile

T-Mobile US Has Capacity for Rewards, Investment: Credit Outlook

Contributing Analysts Stephen Flynn (Credit)

THESIS: T-Mobile US' sturdy debt profile will likely withstand large outflows for shareholder rewards, acquisitions and investment, given the company's rising Ebitda, expanding free cash flow and moderate preferred net leverage of 2.5x. Its bonds (Baa1/BBB+/BBB+) trade at wider spreads than Verizon (Baa1/BBB+/A-) notes, and the gap could narrow over the next year as the former maintains a robust credit profile. (08/20/26)
