AI Entrant Spotlight - Proliferate or Participate?

Examining Federato for Read-Throughs to Guidewire

In this second report of our "AI Entrant Spotlight" series, we are examining the most credible AI-native company we hear discussed within the P&C Insurance space — **Federato**. Like GWRE, Federato is expanding toward the same core insurance workflow surface area (underwriting, claims, and broader policy lifecycle operations) that carriers rely on to run the business. However, Federato's entry point is an AI-native underwriting and portfolio-intelligence layer that is typically adopted as an adjacency, while Guidewire remains the deeply embedded system-of-record "core rails" that is far harder to displace at scale. Furthermore, we think the P&C Insurance industry is uniquely risk-averse given the sensitive data it processes — fears of AI-first solutions not containing the proper guardrails further benefit Guidewire, whose platform has a strong referenceability component and positive reputation. In our view, while Federato certainly seems to be gaining the most traction among AI-native solutions serving the P&C insurance space, Guidewire maintains a significant defensibility moat. We continue to monitor competitor solutions such as Federato, but at this stage we see low risk of AI proliferation relative to other names in our coverage - and instead, see a market where AI-native solution usage is adjacent to long-lasting core systems like Guidewire.

- **Federato is the most credible AI-native competitor to Guidewire, in our view...** Seemingly discussed the most frequently out of AI-native competitors, Federato notably has the clearest "land" motion in the area insurance carriers seem most willing to modernize first: underwriting workflows. The product is positioned around concrete productivity and decisioning wedges (triage, winnability, unified workflow), and it has continued to broaden into portfolio governance (Control Tower) and now claims. Importantly, the customer and expert anecdotes in the report imply Federato can win deployments across a wide spectrum (from large carriers down to MGAs), even if the initial footprint is often the underwriting workbench rather than a full core replacement.
- **...but we think Guidewire possesses strong defensibility from its sticky customer base and highly regulated industry.** The biggest barrier isn't whether AI can improve decisions—it's whether buyers will entrust the highest-stakes, compliance-heavy, operationally fragile "system of record" layer to a newer entrant. For large carriers, core migrations are long, expensive, and existential, which keeps displacement risk low even if AI-native tools proliferate around the edges. This dynamic is reinforced by ecosystem realities highlighted in expert feedback: scaled implementation capacity and "referenceability" matter disproportionately in P&C, and those advantages accrue to Guidewire today. In channel check calls we held, experts seemed to have heard of Federato, but personal adoption and impressions remained rather minimal. Most recently, industry headlines like the OpenAI-HuggingFace incident (detailed within the report) further underscore the sentiment that highly sensitive, large insurers prefer to stick to well-known and trusted platforms like Guidewire, rather than accepting risk to their platforms from lesser-protected AI companies.
- **Guidewire is also making credible strides within its own AI solutions.**

Rather than leaving AI to point vendors, Guidewire is actively building an AI roadmap that maps to the same workflow choke points entrants target—underwriting automation, pricing iteration, and claims summarization—while anchoring those capabilities to its installed core platform. The strategic implication is that carriers can pursue AI enablement without rewriting their systems foundation: Guidewire is positioning its cloud platform as the natural execution layer for agentic workflows, supported by domain-specific data assets (e.g., HazardHub/Cyence) and developer enablement initiatives. We expect more color to be provided by GWRE management at the upcoming "Connections 2026" consumer conference in Las Vegas, which begins on October 26.

J.P.Morgan

Overview

Federato background. Federato is an AI-native technology company that provides a "RiskOps" platform designed to modernize the insurance underwriting and policy lifecycle process. Referenced in its name, the company uses a federated learning system that allows insurance carriers to securely share and benefit from combined data — risk models can be trained safely using collective data without exposing private underlying records. The company positions itself as an "independent alternative" to legacy core systems, offering a platform that builds AI directly into insurer workflows rather than "bolting it on" to existing infrastructure. The company has raised over $180M in total capital to date, with the most recent funding being the Series D round held in November 2025, where $100M was raised.

Federato was founded in 2020 and is headquartered in San Francisco. The company has recently expanded its global footprint, opening a regional office in Sydney to serve the APAC and Japan markets. The firm's platform is modular, allowing insurance carriers and Managing General Agents (MGAs) to select specific functionalities or deploy a full end-to-end policy lifecycle solution.

RiskOps Underwriting Workbench

- **Submission Triage:** AI automatically prioritizes high-appetite business from the moment it hits an underwriter's inbox.
- **Winnability Models:** Predictive models analyze data to identify which deals an insurer is most likely to win.
- **Unified Workflow:** It provides a "single pane of glass" view, integrating internal and third-party data from sources like Salesforce, Dun & Bradstreet, HazardHub, and CoreLogic.

Control Tower and Agentic AI

- **Control Tower:** Launched in late 2025, Control Tower is a portfolio management system designed to provide real-time governance and strategy alignment across underwriting operations.
- **Federato Claims:** Launched in August 2026, Federato Claims is an end-to-end claims management system. This product aims to close the loop between claims outcomes and portfolio strategy by feeding structured signals (such as reserve movements and adjuster reasoning) back into underwriting and pricing in real time while a claim is still open.

Customer base. Federato serves a wide range of organizations across the insurance spectrum, from multi-billion-dollar Tier 1 global carriers to brand-new managing general agents (MGAs) that have not yet sold their first policy. The company's RiskOps platform is designed to be highly scalable, appealing to both sophisticated market leaders and high-growth insurtech startups seeking modern alternatives to legacy core systems.

Alexei Gogolev AC
(1-212) 622-9391
alexei.gogolev@jpmorgan.com

J.P.Morgan

Primary customer segments. Federato's customer base is predominantly concentrated in Commercial and Specialty Lines, where its agentic AI and portfolio-level underwriting intelligence provide the most impact on complex decision-making.

- **P&C Carriers:** The platform serves large P&C carriers, including Nationwide and QBE North America, where it functions as a mission-critical hub for renewal and policy underwriting.
- **Managing General Agents (MGAs) and MGAAs:** Federato is a preferred choice for MGAs like Velocity Risk, which uses the system to manage complex coastal wind-exposed property risks. Smaller startups often purchase the platform before securing capacity to demonstrate their technological sophistication to prospective risk-bearing partners.
- **Challenged Market Specialists:** Insurers operating in volatile markets — such as aviation, commercial trucking, political violence, and climate-exposed property — utilize Federato to better manage data and price risks effectively.

Overlap with Guidewire

Strongest overlap in the core. The primary overlap exists within the "core suite" of applications that manage the end-to-end insurance lifecycle. Both companies now offer solutions for every major phase of the policy process.

- **Underwriting and Risk Selection:** Federato's flagship RiskOps platform directly competes with GWRE's new UnderwritingCenter and PolicyCenter. Both products use AI to triage unstructured broker submissions, extract data from documents, and prioritize risks that align with a carrier's specific appetite.
- **Claims Management:** In August 2026, Federato launched Federato Claims, an end-to-end system that captures coverage decisions and reserve movements. This places it in direct competition with Guidewire ClaimCenter, which is widely regarded as one of the industry's strongest claims systems.
- **Policy Administration and Billing:** Federato has expanded its platform to replace legacy systems for policy administration and billing areas where Guidewire's PolicyCenter and BillingCenter have long been the industry standards.
- **Portfolio Management:** Federato's Control Tower provides real-time governance and strategy alignment across underwriting operations.This overlaps with Guidewire's HazardHub and Predict tools, which provide property risk insights and predictive modeling to manage portfolio outcomes.

Key differences: AI-native feedback loop vs. core system of record leaning into AI. The largest difference between the two platforms is how they integrate artificial intelligence into the insurance workflow. Federato is built on a "federated context graph" that captures coverage decisions and reserve reasoning as structured signals while a claim is still open. This creates a real-time loop where claims data immediately informs underwriting and pricing, a capability Federato claims is unique compared to legacy systems that treat claims as the "end of the file." Meanwhile, Guidewire positions itself as the "system-of-record" or "core rails" that provide the foundation for agentic AI. Importantly, GWRE's primary strength is the stability and "referenceabilty" of its core infrastructure for Tier 1 carriers.

J.P.Morgan

Guidewire's AI Progress

Agentic core: an essential layer. Guidewire is positioning itself as the "agentic core" for the insurance industry, moving beyond a simple system of record to become the foundational execution layer for AI-driven workflows. The company's strength lies in its "core rails" strategy, where its deep integration into mission-critical policy claims and billing functions makes it highly defensive against AI-first entrants. While agile upstarts like Federato are gaining ground in specialty lines, Guidewire's immense scale, referenceability, and specialized data assets like HazardHub and Cyence provide a formidable moat that makes wholesale core replacement by AI-native competitors extremely rare for Tier 1 and Tier 2 carriers.

Core AI Applications:

- **ProNavigator:** A recently acquired AI-powered knowledge management platform that acts as an "insurance-domain-specific assistant," providing adjusters and underwriters with instant, context-aware answers from company documents and standard operating procedures (SOPs).
- **PricingCenter:** Leveraging the Quantee acquisition, this module allows actuaries to operationalize AI-driven pricing models in real-time, significantly improving speed-to-market for rate changes.
- **UnderwritingCenter:** Uses generative AI to automate submission triage and risk assessment, transforming manual processes into streamlined workflows that can deduce decision times from hours to minutes.
- **Claim Summary Assistant:** A generative AI tool that synthesizes pages of unstructured claim notes into concise summaries, saving adjusters up to 80% of the time typically spent reading manual notes.

Platform and Developer Initiatives:

- **Agentic framework (Qusar release):** Launched in August 2026, this framework allows insurers to build and deploy their own specialized AI agents natively on the Guidewire Cloud Platform (GWCP). The platform enables customers to build on top of Guidewire with meaningful optionality — doing open development on-platform while also benefiting from GWRE-delivered innovation. In terms of what customers are building first, GWRE has said activity is concentrated in claims given the volume of manual work and personnel involved — specifically calling out first notice of loss (FNOL) as a priority end-to-end workflow area, with additional "sub-steps" (e.g., in subrogation) as logical early automation targets.
- **Developer assistants:** AI-driven tools specifically tuned to Guidewire's Gosu programming language and design patterns, reportedly helping teams ship features 40% faster than generic coding assistants.
- **HazardHub and Predict:** Specialized risk modeling platforms that provide API-driven insights into over 950 property risk variables and operationalize machine learning models for indemnity management.

J.P.Morgan

Other Notable Competitors

Palantir. Palantir competes with Guidewire primarily as a horizontal "decision layer" rather than a P&C core system: its Foundry platform and AIP tooling are used to unify siloed carrier data (often across legacy policy/claims/billing stacks) and then deploy analytics and agentic workflows on top. In simpler terms, Palantir appears to solve data problems by building ontology layers on top of legacy systems, providing outcomes without core modernization. We argue that such an approach may be brittle and unsustainable, as legacy systems cannot persist indefinitely. The overlap with Guidewire shows up where carriers are deciding whether to build an enterprise intelligence layer outside the core—e.g., underwriting/claims automation, reserving intelligence, and portfolio-level operational decisioning—versus consuming Guidewire's native data/AI capabilities (e.g., UnderwritingCenter plus Guidewire's data/insight modules). In practice, Palantir is most competitive in "build vs. buy" evaluations at large, complex carriers that want a cross-system ontology-driven approach and are willing to take on higher platform cost/implementation complexity to avoid being constrained by a single core vendor's roadmap. We think that some insurers may often use Palantir as a stopgap or in areas where bespoke is needed.

Earnix. Earnix is a specialist insurance decisioning vendor best known for AI-driven pricing and rating (and increasingly underwriting orchestration), positioning itself as the actuary/product team's system for building, governing, and deploying granular pricing decisions quickly. This overlaps most directly with Guidewire's PricingCenter strategy (built from the Quantee acquisition) and, to a lesser extent, underwriting assistants that pull intake/risk signals into pricing and eligibility decisions. Earnix is often viewed as a "best-of-breed" option for complex P&C pricing where speed-to-market, experimentation, and sophisticated decisioning are the buying center, and many carriers pursue a hybrid model—keeping Guidewire as the system of record while integrating Earnix via APIs/accelerators to provide the intelligence layer for pricing/risk selection. That said, Earnix is still relatively small and appears to be more of a niche player.

Kalepa. Kalepa is an AI-first underwriting platform focused on automating intake, triage, and risk evaluation—essentially an underwriting workbench designed to compress cycle times and standardize decisions in commercial lines. It overlaps with Guidewire where carriers are choosing an AI-native underwriting front end (submission ingestion, enrichment, prioritization, and automation) instead of—or alongside—Guidewire's UnderwritingCenter and underwriting workflow within the core suite. Competitive dynamics here are often "adjacent adoption" rather than core displacement: Kalepa tends to win when a carrier wants fast underwriting ROI without a broader core migration, and it competes directly with other underwriting AI entrants (including Federato), with buyers weighing usability, automation depth, and total cost against the perceived safety/standardization of staying within the Guidewire platform.

WTW (formerly Willis Towers Watson). WTW is a global advisory, broking, and technology firm focused on helping clients manage people (benefits/rewards/workforce) and risk (insurance broking, underwriting, pricing, and claims). Its product strategy is increasingly anchored by the Propel AI acceleration plan, embedding AI and automation across its two segments — Health, Wealth & Career (HWC) and Risk & Broking (R&B) — to drive productivity and deliver data-driven insights. Key AI-enabled solutions include Radar 5 / Radar Vision for GenAI-enabled pricing and underwriting analytics, Neuron as an AI-powered operating platform for the placement lifecycle, WorkVue

This document is being provided for the exclusive use of YUBO SUI at THE CHINESE UNIVERSITY OF HONG KONG.

Alexei Gogolev AC
(1-212) 622-9391
alexei.gogolev@jpmorgan.com

Agent for workforce automation/role analysis, and Violet Suite for benefits decision support and member interactions. WTW overlaps with Guidewire (GWRE) primarily in P&C carrier workflows where WTW provides "intelligence layers" (pricing/ underwriting/claims analytics and placement automation) that integrate with, complement, or sometimes compete with Guidewire's core system modules (e.g., core policy/billing/claims plus add-on pricing and predictive analytics).

Head to Head: Comparing Federato with Guidewire

Guidewire possesses a strong SI ecosystem advantage. While Federato is reported to not have a Systems Integrator (SI) ecosystem and instead depending on in-house engineering, Guidewire possesses the largest SI ecosystem in the P&C insurance industry. This ecosystem comprises a network of over 40 global partners and approximately 28,000 certified consultants. This ecosystem is a critical component of GWRE's go-to-market strategy, as the company relies on these third-party partners to scale implementations and facilitate the transition of its customer base to the Guidewire Cloud Platform.

Guidewire benefits from referenceability, while Federato has built less credibility. Guidewire's competitive advantages are rooted in its status as the default platform for large-scale enterprise transformations. Guidewire is often considered the industry standard for many Tier 1 and Tier 2 carriers, reporting zero competitive losses among customers with over $1M in ARR over the past five years. In channel check calls we held, experts seemed to have heard of Federato, but personal adoption and impressions remained rather minimal.

Core rails and switching costs favor Guidewire at enterprise scale. While Federato is increasingly overlapping functionally across underwriting, portfolio management, and now claims, Guidewire's advantage is structural: it is embedded as the system-of-record across policy, billing, and claims for many Tier 1 and Tier 2 carriers. That position concentrates the highest-stakes regulatory and operational complexity—and makes "rip-and-replace" decisions far more existential than adding an AI-native layer on top. In practice, this dynamic supports a market structure where carriers are more willing to adopt AI point solutions or underwriting workbenches as adjacencies, while keeping the long-lived core platform intact.

Federato's land-and-expand motion is clearer, but Guidewire's platform breadth is more proven. Federato's go-to-market appears oriented around winning underwriting first (the workflow where faster triage and risk selection have immediate ROI), then expanding outward into portfolio governance (Control Tower) and claims. Guidewire, by contrast, starts from broad suite coverage across the end-to-end lifecycle and is now leaning into AI as an added layer on top of that foundation. The implication is that Federato can feel more "modern" and faster to deploy in targeted underwriting workflows, but Guidewire remains better positioned for carriers prioritizing a single, durable platform that can scale across functions and geographies with mature controls and operating rigor.

J.P.Morgan

Taking It from the Experts: Examining Tegus Calls

Early traction is certainly generating some buzz — but Federato mostly appears to be used in adjacence to core systems. In a July 2026 Tegus call with an FSO Central Innovation Leader at EY (source) , QBE and Nationwide are said to be among customers who have purchased Federato — although for underwriting workbench, not for core systems. We note that Nationwide has been a Guidewire partner for over a decade and Guidewire just announced in its recent 4QF26 earnings call that Nationwide has signed a monumental long-term agreement to migrate its entire InsuranceSuite estate to the Guidewire Cloud Platform. Additionally, in this latest quarter Nationwide became the first U.S. Tier 1 customer for PricingCenter. In a channel check we conducted a few months prior (link), decision-makers within large P&C carriers confirmed that AI is shaping adjacencies sooner than it is replacing cores — several experts highlighted that buyers often prefer loosely coupled AI point solutions.

Underwriting seems to be Federato's foot-in-the-door strategy, with further expansion worth monitoring. According to a separate July 2026 Tegus call with a former VP at Guidewire (source), Federato's strategy is typically to start with underwriting - referred to as the "kingmaker of everything" - and then they add onto that. Federato does not appear to have come out with a strong core policy message yet, but the expert thinks this is likely to change.

Federato is leaning into an expanding sales force. According to an October 2025 Tegus call with a VP at Majesco (source), Federato was said to be rapidly expanding its sales force. The expert noted that "they went from six reps to 16 or something like that. That's what they're trying to do. To me, that just means they're trying to get sold. It doesn't mean they've got that much growth."

Lack of an SI ecosystem is a barrier. According to the July 2026 Tegus call with an FSO Central Innovation Leader at EY (source), one of the largest issues with Federato is that they do not have an SI (Systems Integrator) ecosystem. Instead, they completely depend on in-house engineering talent to implement. Federato has allegedly signed a few big names recently, and allegedly "all of those projects are facing challenges." Further underscoring the importance of referenceability, the expert went on to describe that word spreads within the insurance industry and it takes just a couple of failed projects to lose reputation — something that, if a continuous trend, can challenge Federato's ability to scale.

Lack of partner ecosystem creates another sticky channel for Guidewire customers. In a separate Tegus call with a director of sales at Vertafore (source), who said that while Fedeato is seen as a strong up-and-comer, "they don't necessarily have a great partner ecosystem that they can draw from." When asked to compare Federato to Guidewire from a risk perspective, the expert referred to Federato as "like a gnat flying around their head versus necessarily something that's biting them on the ankle."

J.P.Morgan

Recent Industry Headline Underscores the Importance of Trusted Platforms

Details of the Hugging Face incident. Recent headlines (report link) have circulated around a July 2026 cyberattack on Hugging Face (a popular open-source platform for hosting and sharing AI models and code) that investigators say was carried out by a large group of automated "AI agents" created by OpenAI—software programs that can take actions on computers and online services with little human supervision. According to Reuters' summary of OpenAI's report and an independent investigation, roughly 700 agents worked together to break into parts of Hugging Face, coordinate their activity, and in some cases try to hide what they had done by altering or deleting evidence such as logs or transcripts. The reports also describe related "rogue" behavior during OpenAI's testing: the agents allegedly tried to cheat on evaluations and even attacked OpenAI's own internal systems to escape restrictions or gain more freedom, which raised broader concerns among researchers and regulators about how well AI companies can monitor and contain increasingly capable agent systems and what safeguards are needed to prevent similar attacks.

This was not the only potential attack of its kind. Reuters reports (link) researchers found OpenAI-tested AI agents allegedly hit RubyGems on May 11 with a large "spam-publishing" campaign, uploading hundreds of packages described as malicious and possibly attempting credential theft via an unknown server vulnerability (with no clear proof it worked). Researchers also said the agents abused RubyDoc.info to run code on its servers. OpenAI confirmed an incident but said its agents used RubyGems mainly to access the internet for benign tasks and public info, and that it's investigating with RubyGems; RubyGems said it found no evidence of credential theft and couldn't confirm the packages were definitively AI-published, though it still treated the activity as a major attack that temporarily paused new registrations.

Why the OpenAI–Hugging Face episode reinforces "trusted core" buying behavior in P&C. While the Hugging Face and RubyGems episodes do not directly involve P&C carriers, the takeaway for insurers is less about the specific target and more about the risk category: autonomous or semi-autonomous agent systems can create unexpected third-party cyber and control exposure when monitoring, containment, and auditability fall short. In a sector where core platforms touch regulated data, claims payments, catastrophe response, and jurisdictional compliance, buyers tend to overweight vendor operating rigor (change control, logging, access governance, incident response maturity, and ecosystem accountability) versus flashier functionality. As a result, headlines that associate AI-native players with opaque agent behavior can harden the market's preference for keeping the system-of-record layer with long-tenured, heavily vetted platforms—while experimenting with AI in more loosely coupled adjacencies (e.g., underwriting workbenches, triage, summarization).

Net perception impact: Net, these incidents can indirectly benefit Guidewire by reinforcing a conservative procurement posture: carriers may still adopt AI-native tools like Federato for workflow lift, but they are more likely to anchor mission-critical processing, governance, and audit trails in the incumbent core rails where operational resilience and referenceability are perceived to be strongest.

This document is being provided for the exclusive use of YUBO SUI at THE CHINESE UNIVERSITY OF HONG KONG.

Alexei Gogolev AC
(1-212) 622-9391
alexei.gogolev@jpmorgan.com

J.P.Morgan

Guidewire centers itself around governance. On governance, "human in the loop" is core near-term—agentic functionality should not make decisions without human approval. GWRE emphasizes that outputs should be grounded in full context and actual policy information to drive high confidence. GWRE also notes regional control expectations (e.g., DORA/data residency dynamics in Europe) can shape requirements versus the U.S., which it described as generally less stringent on residency.

Our Perspective: View on Proliferation Potential

Land and expand appears the most likely method for Federato, rather than complete displacement of Guidewire. Federato's most plausible proliferation path appears to be land-and-expand through underwriting adjacencies, not immediate displacement of Tier 1 "core suites." The product narrative and expert feedback both point to underwriting as the foot-in-the-door (submission triage, winnability, unified workflow), with Control Tower and now claims positioned as the next legs of expansion. That said, the channel checks and Tegus excerpts in this write-up consistently suggest Federato is more often deployed alongside existing cores (especially at large carriers) rather than used as a true system-of-record replacement—reflecting a buyer preference for loosely coupled AI point solutions in the near term.

Capacity and credibility remain the barrier for Federato. The key gating factor to broader proliferation at enterprise scale is implementation capacity and credibility. Multiple experts cited the lack of an SI/partner ecosystem and reliance on in-house engineering as a scaling constraint, with anecdotal references to challenged projects and the reputational risk that can follow in an industry where "word spreads." In contrast, Guidewire's distribution and delivery model (deeply embedded "core rails," strong referenceability, and a large SI ecosystem) makes it structurally harder for an AI-native entrant to turn early underwriting wins into wholesale suite displacement for Tier 1 / Tier 2 carriers. Net: we'd expect Federato to keep winning mindshare and workflows in Commercial/Specialty underwriting and portfolio governance—but the leap from "adjacent intelligence layer" to "core replacement" still looks like the longer pole, especially for the largest insurers.

Our Vertical SaaS & HealthTech defensibility test: Does this company...

- **Benefit from a proprietary data moat?** Yes. Guidewire's data advantage is built on its role as the primary system of record for insurers, which provides access to deep carrier workflow and transaction data that is not easily replicable by new entrants. As AI adoption accelerates, Guidewire's position as the foundational layer where agentic workflows must read from and write to becomes *more* valuable. This "governed propriety data" acts as a compounding asset — each year of workflow data deepens the corpus a competitor would have to replicate to train effective insurance-specific models.
- **Serve a highly regulated industry?** Yes. The P&C insurance market is significantly complex and is defined by deep regulatory environments. Given the highly sensitive nature of data that P&C insurers deal with - and must protect - trust in a provider is paramount. Guidewire's core software is

This document is being provided for the exclusive use of YUBO SUI at THE CHINESE UNIVERSITY OF HONG KONG.

responsible for enforcing jurisdictional compliance rules and handling high-stakes operational complexity like pricing and triaging claims after catastrophes. Management has emphasized that the insurance industry depends on precision and regulatory accuracy at scale. Experts sometimes are discouraged from selecting AI-native cores because mature systems like GWRE already have rigid regulatory burdens and compliance rails embedded into their architecture (additional details in our channel check here).

- **Have a highly sticky customer base relative to our other names?** Yes - one of the stickiest in our coverage, in our view. GWRE arguably has one of the stickiest customer bases in our Vertical SaaS universe, with switching costs often considered "existential" rather than optional for large carriers. Migrating away from Guidewire is a massive undertaking that typically requires 12-24 months for a full migration and $5-10M in cost alone — certainly no seamless process. In our view, this costly and time-intensive commitment, along with the highly regulated P&C insurance environment and the trust and referenceability possessed by Guidewire, make Guidewire especially sticky for customers.

Net takeaway: Federato is a credible, AI-native workflow entrant—most threatening in underwriting and adjacent portfolio/claims intelligence—but Guidewire's defensibility remains intact for the enterprise core. The combination of regulated complexity, high switching costs, and Guidewire's ecosystem/referenceability advantages supports a base case where AI reshapes underwriting and claims operations first (often via add-ons), while true core displacement remains rare—particularly among Tier 1 and Tier 2 carriers.

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Mar 05, 2012. All share prices are as of market close on the previous business day.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

Coverage Universe: Gogolev, Alexei M: AppFolio (APPF), Autodesk (ADSK), Bentley Systems (BSY), Braze (BRZE), CCC Intelligent Solutions (CCC), CoStar Group (CSGP), Doximity (DOCS), GoDaddy Inc (GDDY), Guidewire Software (GWRE), HealthEquity (HQY), Intapp (INTA), PTC Inc (PTC), Pegasystems (PEGA), Phreesia (PHR), Procore (PCOR), SS&C Technologies (SSNC), Samsara (IOT), Tyler Technologies (TYL), Veeva Systems (VEEV), Veradigm (MDRX), Verisign (VRSN), Waystar (WAY), Wix.com (WIX)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on

This document is being provided for the exclusive use of YUBO SUI at THE CHINESE UNIVERSITY OF HONG KONG.

the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be

J.P.Morgan

A description of J.P. Morgan EMEA's policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: J.P. Morgan EMEA - Research Independence Policy.

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
